**Remarks/Market Observations:**

The following observations were gathered from market personnel and vendors this week:

- Ample supplies of Bangus and Tilapia are observed in the monitored retail markets this week, resulting to stable prices of the foregoing commodities.
- Local-Fresh Galunggong is still sold at a relatively high price due to:
  - Most monitored markets sourcing mainly from Lucena, Quezon where prices are higher due to shorter transit time, which affect freshness of the commodity;
  - Irregularities in the volume of unloading in major fish ports due to hampered fishing operations brought by Tropical Storm "Pepito";
  - Secondary type markets (such as Kamuning, Galas, and Tandang Sora) source Local-Fresh Galunggong from primary markets (i.e., Farmers Market) further contributing to the high retail price of the commodity.
- Imported-Frozen Galunggong is offered at Munoz, Balintawak, Farmers, and Mega-Q Markets as an alternative to Local-Fresh Galunggong.
- At Munoz Market, most of the available fishery commodities are imported (frozen) in response to the high selling price of local marine commodities. The Division has already forwarded a formal report to the BFAR Enforcement Team, urging verification and appropriate action on the matter.
- Top fishery commodities in the 11 monitored retail markets are sourced mainly from the following areas:
  - Bangus - Bulacan
  - Tilapia - Batangas
  - Local Galunggong - Lucena, Quezon
- As the demand for fishery commodities remain low in the monitored retail markets, vendors continue to limit volumes of fishery commodities for selling or opt for a different schedule of selling fishery commodities (i.e., half-day basis or on weekends only).
- Precautionary safety measures such as but not limited to wearing of face masks and face shields, mandatory temperature checks and hand disinfection, and limiting of number of buyers entering the markets, are still being observed in the monitored markets to safeguard consumers and vendors against COVID-19.

NA- Not Available During Price Monitoring
