(-) Not Available During Price Monitoring

Remarks/Market Observations:

CAR

Week 1 (Apr. 1-6)

Prices of some fish commodities depend on the source area, taking into consideration the logistics costs
Prices fluctuate depending on the volume of stocks/supply and number of consumers (law of supply and demand)
Aquaculture commodities are more expensive than those caught in the wild.
Some enumerators noticed mislabelled fishery commodities and have taken action to correct this practice.
Some enumerators noticed mishandling of commodities during inspection and monitoring.

(No Source Areas)

Week 2 (Apr. 7-13)

Prices of some fish commodities depend on the source area, taking into consideration the logistics costs
Prices fluctuate depending on the volume of stocks/supply and number of consumers (law of supply and demand)
Aquaculture commodities are more expensive than those caught in the wild.
Some enumerators noticed mislabelled fishery commodities and have taken action to correct this practice.

<p>BARMM No submission of RCPMR due to the termination of contractual of employees (enumerators) last January 2019 relative to the ratification of Bangsamoro Organic Law and the Implementation of new Bangsamoro Autonomous Region in Muslim Mindanao (BARMM)</p>																						
<p>NCR Week 1(Apr. 1-6) *According to interviewed market vendors, the supply of marine fish (including Galunggong) is higher this week as compared to last week due to a decrease in supply caused by the occurrence of full moon. Despite the increase in the supply of Galunggong, the prevailing price of local Galunggong remained at last week's prevailing price of Php160.00/kg. *Majority of the local Galunggong being sold in the monitored markets are small to medium-sized. *It was observed that there are no imported/frozen Galunggong in all the monitored markets in NCR during this week's actual monitoring. it was also observed that some vendors in the monitored markets sell their supply of imported Galunggong in the afternoon after their supply of local GG has sold out. *The prevailing price of medium-sized Bangus increased by Php10.00/kg from its prevailing price last week of P140.00/kg. According to some interviewed market vendors, the price of Bangus remained low this week due to an abundance in supply of the said commodity alongside the low demand from the customers (i.e., "matumal ang bentahan"). *As per market interview, the abundance in the supply of Bangus is attributable to the current harvesting season of the said commodity. *According to market vendors, there are a fewer number of buyers in the markets this week because they are saving money in preparation for the upcoming graduation ceremonies. It was also observed that in some of monitored markets, the price of live Tilapia is higher by Php20/kg as compared to fresh dead Tilapia.</p> <p>Week 2(Apr. 7-13) * According to some interviewed market vendors, the supply of Bangus in the monitored retail markets are stable. Despite this observation, the prevailing retail price of medium-sized Bangus increased by Php10.00/kg this week from its prevailing price of Php150.00/kg last week. As for Tilapia and local Galunggong, their prevailing price remained at Php160.00/kg and Php100.00/kg, respectively. According to interviewed market vendors, this might be due to the steady supply of the said commodities. *It was also observed that there are no imported/frozen Galunggong in all the monitored markets in NCR during the actual monitoring. As per market personnel, the local GG has a longer shelf life and is preferred by the buying public. *Majority of the local Galunggong being sold in the monitored markets are small to medium-sized. *It was observed in some of monitored markets that the price of live Tilapia is higher by Php20.00/kg as compared to fresh dead Tilapia.</p> <p>Week 3(Apr. 14-20) *The prevailing retail price of medium-sized Bangus, Tilapia, and Galunggong remained at its price last week of Php160.00/kg, Php100.00/kg and Php160.00, respectively. According to some interviewed market personnel, this might be due to the stable supply and relatively low demand of the three commodities in the retail markets. However, some vendors noted that the prices of the three commodities are expected to lightly increase in the coming days due to the observance of the Holy week. *Majority of the local Galunggong being sold in the monitored markets are small to medium-sized. *According to some enumerators, the supply of high-valued marine fishes (e.g., Lapu-lapu, Maya-Maya), Hipon, and Sugpo are low this week due to the scarce supply at the Navotas Fish Port. *It was also observed that there are no imported/frozen Galunggong in all the monitored markets in NCR. As per market personnel, this is because local GG has a longer shelf life and is preferred by the buying public.</p> <p>Week 4(Apr. 21-27) *It was observed during the team's actual price monitoring that there is a relatively low supply of marine fishes (including Galunggong) in all the monitored retail markets in NCR this week. According to interviewed market vendors, this might be attributed to the occurrence of full moon last April 19; whereas, marine fishes are scattered and difficult to catch. Despite these observations, the team's price monitoring data showed that the prevailing retail price of medium-sized Galunggong remained at its price last week of Php160.00/kg. *Majority of the local Galunggong being sold in the monitored retail markets are small to medium-sized. *The prevailing price of medium-sized Bangus decreased by Php10.00/kg from its prevailing price last week of Php160.00/kg. This might attributed to the abundance in supply of the said commodity alongside with the low demand from the buyers (i.e., "matumal ang bentahan"), as per interview with market vendors. *The prevailing price of medium-sized Tilapia remained unchanged at Php100/kg .</p> <p>Week 5(Apr. 28-30) *The prevailing retail prices of medium-sized Bangus, Tilapia and Galunggong remain at last week's data of Php160.00/kg, Php100.00/kg, and Php160.00/kg, respectively. According to market vendors, there are enough supply of the said commodities in all the monitored markets in NCR. *The demand for fish from the buying public this week is still low (i.e., "matumal ang bentahan") that might contribute to the relatively low price of fish commodities, as per vendors. It was also observed during the actual monitoring that the low demand has caused a lessened number of vendors in the monitored wet markets. *Based on team's actual price monitoring, there is an abundance in the supply of Tulingan (Auxis rochei) in majority of the monitored market in NCR.</p>
