<p>NCR</p> <p>Week 1 (Feb. 1-2) *DA-BFAR has lifted the closed season for Galunggong in Northeastern Palawan, with resumption of commercial fishing activities starting Feb. 1, 2019. (Source: Press Release by BFAR RFO-4B, dated 31 Jan. 2019) *It was observed during the actual price monitoring that despite the lifting of the closed season last Jan 31, majority of the stalls in the monitored retail markets in NCR still sell only frozen Galunggong and only a few stalls sell local GG. *Despite the recent news on the Taal Lake fish kill, the retail prices of the affected commodities (Bangus & Tilapia) remained at Php160/kg and Php100/kg, respectively. According to the interviewed vendors the supply of Bangus and Tilapia is still stable at this time. *The price of marine fish is relatively high at this time due the limited supply that may be attributed to the cold weather for which the catch is usually low and difficult because fish tend to stay at the bottom;</p> <p>Week 2 (Feb. 3-9) *DA-BFAR has lifted the closed season for Galunggong in Northeastern Palawan, with resumption of commercial fishing activities starting Feb. 1, 2019. (Source: Press Release by BFAR RFO-4B, dated 31 Jan. 2019) *It was observed during the actual price monitoring that despite the lifting of the closed season last Jan 31, majority of the stalls in the monitored retail markets in NCR still sell only frozen Galunggong and only a few stalls sell local GG. *Despite the recent news on the Taal Lake fish kill, the retail prices of the affected commodities (Bangus & Tilapia) remained at Php160/kg and Php100/kg, respectively. According to the interviewed vendors the supply of Bangus and Tilapia is still stable at this time. *The price of marine fish is relatively high at this time due the limited supply that may be attributed to the cold weather for which the catch is usually low and difficult because fish tend to stay at the bottom;</p> <p>Week 3 (Feb. 10-16) *It was observed during the team's actual price monitoring that the supply of local GG increased this week (Feb. 11-15) as compared to last week (Feb. 4-8, 2019), which may have caused the Php20.00/kg decrease in the prevailing price of the said commodity from Php180.00 of last week. *It can also be noted that there is a very noticeable decrease in the fish stalls that sell frozen/imported GG. According to some vendors, this is because local GG is easier to sell and is more preferred by customers as compared to imported GG. *The prevailing price of medium-sized Bangus decreased by Php10.00/kg from Php160.00/kg of last week. For Tilapia, the prevailing price remained at Php100.00. *Generally, marine fish price is high at this time due to the cold weather for which the catch is usually low and difficult because fish tend to stay at the bottom of the ocean.</p> <p>Week 4 (Feb. 17-23) *The prevailing price of medium-sized Bangus had a P30.00/kg increase this week from its prevailing price of Php150.00/kg last week (Feb. 11-15). According to the feedback to the enumerators, some vendors are buying their supply in the nearby wholesale markets (i.e Farmers) which contributes to relative high price of the said commodities. *It can be noted that there is a very noticeable decrease in the fish stalls that sell frozen/imported GG. According to some vendors, it is because local GG is easier to sell and is more preferred by customers as compared to imported GG. *It was observed this week that there is a decrease in the number of fish stalls that sell marine fishes. According to some vendors, this might be due to the occurrence of full moon (Feb. 19), which led to lesser catch, thus lesser supply. *Generally, marine fish price is high at this time due to the cold weather for which the catch is usually low and difficult because fish tend to stay at the bottom of the ocean.</p> <p>Week 5 (Feb. 24-28) *The prevailing price of medium-sized Bangus and Tilapia remained from its prevailing price last week of Php 150.00/kg and Php 100.00/kg, respectively. *It was observed that there was a noticeable decrease in the fish stalls that sell frozen/imported GG. According to some vendors, this is because local GG is easier to sell and is more preferred by customers as compared to imported GG. It can also be noted that some of the monitored markets sell imported GG in the afternoon after their supply of local GG has sold out. *Majority of the local GG that are available in the markets are small to medium-sized.</p> <p style="text-align: center;">*****NOTHING FOLLOWS*****</p>
