(-) Not Available During Price Monitoring

Remarks/Market Observations:

CAR

Week 1 (Mar. 01-02)
1. Prices of some fishery commodities depend on the source area
2. Prices may fluctuate depending on the volume of stocks/supply and number of consumers
3. Aquaculture commodities are more expensive than capture.
4. It appeared that some fishery commodities have fixed prices (do not vary in sizes)
5. Some fishery commodities are mislabeled. Enumerators have called attention of fish vendors of the right labelling.
(No Source Areas)

Week 2 (Mar. 03-09)
1. Prices of some fishery commodities depend on the source area
2. Prices may fluctuate depending on the volume of stocks/supply and number of consumers
3. Aquaculture commodities are more expensive than capture.
4. It appeared that some fishery commodities have fixed prices (do not vary in sizes)
5. Some fishery commodities are mislabeled. Enumerators have called attention of fish vendors of the right labelling.
(No Source Areas)

Week 3 (Mar. 10-16)
1. Prices of some fishery commodities depend on the source area
2. Prices may fluctuate depending on the volume of stocks/supply and number of consumers
3. Aquaculture commodities are more expensive than capture.
4. It appeared that some fishery commodities have fixed prices (do not vary in sizes)
5. Some fishery commodities are mislabeled. Enumerators have called attention of fish vendors of the right labelling.

No submission of RCPMR due to the termination of contractual of employees (enumerators) on January 2019 relative to the ratification of Bangsamoro Organic Law and the Implementation of new Bangsamoro Autonomous Region in Muslim Mindanao (BARMM)

NCR

Week 1 (Mar. 01-02)

Based on the team's actual price monitoring, the prevailing price of medium-sized Bangus, Tilapia and Galunggong remained at Php150.00/kg, Php100.00/kg, and Php160.00/kg, respectively, since last week (Feb. 25-Mar.1). According to interviewed market vendors, this might be due to an abundance in the supply of the said commodities in the market. It was also noted during the interview that the demand for Bangus is currently low, which might have contributed to its relatively low price.

*Majority of the local GG that are available in the monitored markets are small to medium-sized.

*It was observed that there was a noticeable decrease in the fish stalls that sell frozen/imported GG. According to some vendors, this is because local GG is easier to sell and is more preferred by customers as compared to imported GG. It can also be noted that some of the monitored markets sell imported GG in the afternoon after their supply of local GG has sold out.

*According to market vendors, there are a fewer number of buyers in the markets this week because they are saving money in preparation for the upcoming graduation ceremonies.

Week 2 (Mar. 03-09)

Based on the team's actual price monitoring, the prevailing price of medium-sized Bangus, Tilapia and Galunggong remained at Php150.00/kg, Php100.00/kg, and Php160.00/kg, respectively, since last week (Feb. 25-Mar.1). According to interviewed market vendors, this might be due to an abundance in the supply of the said commodities in the market. It was also noted during the interview that the demand for Bangus is currently low, which might have contributed to its relatively low price.

*Majority of the local GG that are available in the monitored markets are small to medium-sized.

*It was observed that there was a noticeable decrease in the fish stalls that sell frozen/imported GG. According to some vendors, this is because local GG is easier to sell and is more preferred by customers as compared to imported GG. It can also be noted that some of the monitored markets sell imported GG in the afternoon after their supply of local GG has sold out.

*According to market vendors, there are a fewer number of buyers in the markets this week because they are saving money in preparation for the upcoming graduation ceremonies.

Week 3 (Mar. 10-16)

No submission- NCR enumerators attended Training-Workshop on Fish Identification

Week 4 (Mar. 17-23)

*According to some interviewed market vendors, there is a low supply of marine fish (including Galunggong) this week due to the occurrence of full moon last March 21 for which marine fishes are scattered and difficult to catch. This was supported by PFDA, who noted that there is a low volume local Galunggong unloaded at the fish port. Despite the less supply of Galunggong, the prevailing price of Galunggong remained at Php160.00/kg from the last week of monitoring (Mar.4-8).

*Majority of the local GG that are available in the monitored markets are small to medium-sized.

*It was observed that there are no imported/frozen Galunggong in all the monitored markets in NCR during the actual monitoring: whereas some monitored markets sell their supply of imported Galunggong in the afternoon after their supply of local GG has sold out.

*The prevailing price of medium-sized Bangus is currently low this week. According to some interviewed market vendors, this might be due to the abundance in supply of the said commodity alongside the low demand from the customers (i.e., "matumal ang bentahan"). It was also derived during market interviews that some vendors are selling their Bangus at a very low price just to get back their capital

*According to market vendors, there are fewer number of buyers in the market this week because they are saving money in preparation for the upcoming graduation ceremonies.

*Generally, marine fish price is high at this time due to the low volume of supply brought by the occurrence of fullmoon.

Note: There is no price monitoring conducted on the second week of this month (March 11-15) due to the NCR monitoring team's Training-Workshop on Fish Identification.

Week 5 (Mar. 24-31)

*According to interviewed market vendors, the supply of marine fish (including Galunggong) is still low this week due to the occurrence of fullmoon for which the marine fishes are scattered and difficult to catch. This was supported by PFDA, who noted that there is a low volume local Galunggong unloaded at the fish port. Despite the lesser supply of Galunggong, the prevailing price of Galunggong remained at last week's prevailing price of Php160.00/kg.

*Majority of the local GG that are available in the monitored markets are small to medium-sized.

*It was observed that there are no imported/frozen Galunggong in all the monitored markets in NCR during the actual monitoring: whereas some monitored markets sell their supply of imported Galunggong in the afternoon after their supply of local GG has sold out.

*The prevailing price of medium-sized Bangus decreased by Php10.00/kg from its prevailing price last week of P150.00/kg. According to some interviewed market vendors, this might be due to the abundance in supply of the said commodity alongside the low demand from the customers (i.e., "matumal ang bentahan"). It was also derived during market interviews that some vendors are selling their Bangus at a very low price just to get back their capital.

*According to market vendors, lesser buyers are observed in the market this week and according to them, this might be due to upcoming graduation day where buyers are saving their money to the said event.

*Generally, marine fish price is high at this time due to the low volume of supply brought by the occurrence of fullmoon.
