NA- Not Available during price monitoring activity (Source area)

(-)- Not Available during price monitoring activity (Price & Volume)

Remarks/Market Observations:

CAR

There are limited varieties of fishery commodities available in markets.

R 01

Week 1-3(Oct. 1-19)

There is an abundant supply of commodities in some markets due to the increase in demand.

Week 4(Oct. 20-26)

Tilapia is being sold in some markets at a fixed price of Php120.00/kg regardless of size.

R 03

Prices of fish commodities depend on the fish catch, size, and consignment basis.

R 04A

Week 1(Oct. 1-5)

Sardinella lemuru in Lucena City Public Market is being sold at a low price due to its small size and abundant volume of catch.

Prices of some fishes are high due to bad weather condition and low supply.

Week 2-3(Oct. 6-19)

Prices of some marine commodities are high due to bad weather condition and low supply.

Some of the vendors in Calamba, Laguna and Angono, Rizal are observed to be selling their commodities to other vendors, resulting to a higher price of some commodities such as

Week 4(Oct. 20-26)

Sardinella lemuru in Tanza Public Market is being sold at a very high price because of low supply.

Prices of some marine fishes are high due to bad weather condition.

Week 5(Oct. 27-31)

Prices of some marine fishes are high due to bad weather condition.

R 04B

Week 1-4(Oct. 1-26)

Prices of some fishery commodities are high due to the *habagat*.

R 08

Week 1(Oct. 1-5)

There is a low supply and high price of some fishery commodities due to the occurrence of full moon

Week 2(Oct. 6-12)

There is a low supply and high price of some fishery commodities due to the occurrence of full moon

Week 3-5(Oct. 13-31)

Price of fishery commodities in some monitored markets are high.

There is a high supply of Tamarong, Tangigue, Saguison and Lapu-Lapu (Pogapo) at large sizes.

R 09

Week 4-5(Oct. 20-31)

There are limited varieties of fishery commodities available in markets due to the bad weather condition.

R 10

Week 1-2(Oct. 1-12)

There is a low supply of commodities in the Camiguin province.

R 11

There is a low supply of some commodities in Davao Oriental due to the bad weather condition.

R 13

Week 5(Oct. 27-31)

There is a low supply of some commodities in some provinces due to the bad weather condition

NCR

Week 1(Oct. 1-5)

*The prevailing retail prices of Bangus, especially the large-sized, remain relatively higher this week due to (1) the relatively higher wholesale price from their respective suppliers caused by the low volume of unloading in major fish ports in NCR; and (2) the higher demand of some fishery commodities relative to the recent issue on the "African Swine Flue" (ASF), whereas, consumers prefer fish than pork. Per interviews, the decrease in the supply of Bangus might also be attributed to the producers' postponement of harvest in an effort to increase the size and value of their Bangus in preparation for the upcoming Christmas holidays on December.

*As for local Galunggong "lalaki" (Decapterus macrosoma), some market vendors increased their selling price and lessened their supply for selling due to the low supply caused by the low supply coming from major fish ports, and the relatively higher wholesale price. The lesser supply also caused some retail vendors to sell frozen/imported Galunggong as well as Galunggong "balsa" (Decapterus macrosoma) and Galunggong "babae" (Decapterus russelli) instead.

*Meanwhile, it was observed that there is a stable supply of the Galunggong "Lalaki" at the Tandang Sora, Balintawak, Farmers and Mega Q Markets.

*The price and supply of Tilapia remain stable in all the monitored markets due to the adequate supply coming from Batangas and Pampanga. However, there were feedbacks from retailers that some wholesalers are selling at a higher price.

*Despite the increase in the demand due to the ASF issue, there are vendors from some markets (e.g., Munoz, Kamuning, and Quinta Markets) who noted that the demand for fishery commodities remain low, urging them to lower their selling price (i.e., bagsak presyo) just to get back their capital.

*The nearing of Christmas holidays may also have contribute to the relatively higher wholesale price of some fishery commodities. Some vendors have also cautioned of a possible further increase due to the approaching Christmas holidays.

*Some markets vendors are selling live Tilapia at Php20.00/kg higher than fresh chilled Tilapia.

*Bangus, Tilapia, and local Galunggong are being sold in mixed sizes in some of the monitored retail markets.

*The prevailing retail prices of medium-sized Bangus, Tilapia and, Galunggong remained unchanged at Php150.00-180.00/kg, Php100.00/kg, and Php160.00/kg, respectively.

Week 2(Oct. 6-12)

Manila Bay fish kill due to pollution (ABS-CBN News, 12 October 2019, Retrieved from: (<https://news.abs-cbn.com/news/10/12/19/manila-bay-fish-kill-due-to-pollution-bfar>)

*Fish kill incident happened in Las Piñas and Parañaque this week. According to B FAR CALABARZON Regional Director Sammy Malvas, water quality tests have showed poor levels of dissolved oxygen and high levels of ammonia and phosphates are the cause of the said fish kill. The fish kill has no impact yet on the supply of marine fishes but the B FAR Price Monitoring team is continuously monitoring its effect.

*The higher wholesale price of local Galunggong "lalaki" (Decapterus macrosoma) from suppliers has reportedly urged some retail vendors to (1) lessen their supply for selling in the market, (2) increase their selling price, and (3) for some to sell frozen/imported Galunggong (Decapterus spp.).

*There is still a low volume of unloading in major fish ports, which might be attributed to (1) the upcoming full moon on October 14, where the bright moon light causes marine fishes to scatter making them difficult to catch, (2) the cold weather causing marine fishes to stay at the bottom of the ocean that may contributed to the low volume of catch, (3) the low demand from the buying public (i.e., matumal ang bentahan) and (4) the lean season for some marine fishes which may contribute to the low volume of catch.

*There is also an observed abundant supply of frozen/imported supply of Tulingan (Auxis spp.) and other species of Galunggong such as Galunggong "Balsa" (Decapterus macarellus), "Babae" (Decapterus russelli), and "Burot" (Decapterus kurroides) being sold in some of the monitored markets.

*It was also observed that there are lesser supply of seaweeds and some high-value marine fishes like Lapu-Lapu (Epinephelus spp.) in some of the monitored market.

*The supply of Bangus remain low in majority of the monitored retail markets due to the low supply coming from some major source areas such as Pangasinan and Bulacan. It was derived from interviews that some producers are extending their culture period to increase the size and value of their Bangus in preparation for the upcoming Christmas holidays.

*The price and supply of Tilapia remain stable in all the monitored markets due to the adequate supply coming from Batangas and Pampanga. However, there were feedbacks from retailers that some wholesalers are selling at a higher price.

*Some vendors from Munoz, Commonwealth, Kamuning, and Quinta Markets noted that the demand for fishery commodities remain low, urging them to lower their selling price (i.e., bagsak presyo) just to get back their capital.

*The nearing of Christmas holidays may also have contribute to the relatively higher wholesale price of some fishery commodities. Some vendors have also cautioned of a possible further increase while approaching Christmas holidays.

*Some markets vendors are selling live Tilapia at Php20.00/kg higher than fresh chilled Tilapia.

*Bangus, Tilapia, and local Galunggong are being sold in mixed sizes in some of the monitored retail markets.

*The prevailing retail prices of medium-sized Bangus, Tilapia and, Galunggong is currently at Php180.00/kg, Php100.00/kg, and Php160.00/kg, respectively.

Week 3(Oct. 13-19)

*The supply of some marine fishes, including local Galunggong "Lalaki" (Decapterus macrosoma), remain low in all the monitored retail markets due to (1) the cold weather, where marine fishes tends to stay at the bottom of the ocean that may contributed to the low volume of catch, (2) the occurrence of full moon last October 14, where the bright moon light causes marine fishes to scatter making them difficult to catch, (3) the lean season for some marine fishes. In addition, it was observed that some vendors lessened their supply for selling due to the higher wholesale price among some wholesale suppliers alongside the low demand from the buying public (i.e., matumal ang bentahan).

*The low supply for local Galunggong "lalaki" and other marine fishes also urged some retail vendors to (1) increase their prices, and (2) for some to sell frozen/imported fishery commodities (e.g., Auxis spp., Decapterus spp.).

*There is an observed abundant supply of other species of Galunggong like "Balsa" (Decapterus macarellus), and "Babae" (Decapterus russelli) being sold in some of the monitored markets.

*It was observed that there is a lesser supply of seaweeds in some of the monitored market.

*As for Bangus, majority of the monitored markets have lower supply except at the Trabajo, Quinta, Farmers, and Muñoz Markets where there is stable supply. According to interviews, this is due to the low supply coming from major source areas such as Pangasinan and Bulacan due to some producers extending the culture period of their Bangus in an effort to increase the size and value in preparation for the upcoming Christmas holidays. On the other hand, some retail vendors were observed to sell their supply at higher price despite the stable supply due to higher wholesale price from their respective suppliers.

*On the other hand, the price and supply of Tilapia remain stable in all the monitored markets due to the adequate supply coming from Batangas and Pampanga.

*Some vendors from Munoz, Commonwealth, Kamuning, and Quinta Markets noted that the demand for fishery commodities remain low, urging them to lower their selling price (i.e., bagsak presyo) just to get back their capital.

*Some markets vendors are selling live Tilapia at Php20.00/kg higher than fresh chilled Tilapia.

*Bangus, Tilapia, and local Galunggong are being sold in mixed sizes in some of the monitored retail markets.

*The prevailing retail prices of medium-sized Bangus, Tilapia and, Galunggong is currently at Php160.00/kg, Php100.00/kg, and Php160.00/kg, respectively.

Week 4(Oct. 20-26)

*Based on the team's actual price monitoring, the supply of Bangus remain low in majority of the monitored retail markets this week (October 21-25) except at the Quinta, Trabaho, Mega-Q and Farmers Markets where there is a stable supply of the said commodity. The low supply of Bangus may be attributed to the low volume coming from major source areas such as Pangasinan and Bulacan due to producers extending their culture period in an effort to increase the size and value of their Bangus in preparation for the upcoming Christmas holidays.

*However, it was observed that the some wholesalers are still selling at a relatively higher price due to the nearing of the Christmas holidays.

*The supply of marine fishes, including local Galunggong, are still low in majority of the monitored retail markets due to the low volume of catch caused by (1) the cold weather where marine fishes tends to stay at the bottom of the ocean and (3) the lean season for some marine fishes. The low supply of marine fishes has resulted to a higher wholesale price from their respective supplier, urging some retail vendors to: (1) also increased their selling price, (2) lessen their supply for selling, and (3) for some to sell frozen/imported fishery commodities (e.g., Auxis spp., Decapterus spp.) or other species of Galunggong such as "Babae" (Decapterus russelli), "Burot" (Decapterus tabl), and "Balsa" (Decapterus macarellus).

*Meanwhile, the price and supply of Tilapia remain stable in all the monitored markets due to the adequate supply coming from Batangas and Pampanga.

*It was observed that there is a lesser supply of seaweeds available in some of the monitored markets.

*Some retailers at the Munoz, Commonwealth, Kamuning, and Quinta Markets noted that the demand for fishery commodities is currently low, urging them to lower their selling price (i.e., bagsak presyo) just to get back their capital.

*Some markets vendors are selling live Tilapia at Php20.00/kg higher than fresh-chilled Tilapia.

*The supply of Bangus, Tilapia, and local Galunggong are being sold in mixed sizes in some of the monitored retail markets.

*The prevailing retail prices of medium-sized Bangus, Tilapia and, Galunggong is currently at Php180.00/kg, Php100.00/kg, and Php160.00/kg, respectively.

Week 5(Oct. 27-31)

*The supply of marine fishes, including local Galunggong, remain low in all the monitored retail markets. The low supply may be attributed to: (1) the low volume coming from major fish ports such as Navotas and Malabon, (2) the cold weather brought by Northeast wind "Hanging Amihan", where marine fishes tends to stay at the bottom of the ocean that may contributed to the low volume of catch, and (3) the lean season for some marine fishes.

*The low supply, according to vendors, had caused an increase in the selling price of some wholesalers, urging some retailers to: (1) also increase their selling price, (2) and for some to lessen their supply for selling, (3) to not open their stalls, and (4) to sell frozen/imported fishery commodities (e.g., Auxis spp., Decapterus spp.,) or other species of Galunggong such as "Babae" (Decapterus russelli), "Burot" (Decapterus tabl), and "Balsa" (Decapterus macarellus) instead.

*As for Bangus, there is a stable supply of the said commodity in majority of the monitored retail markets this week (October 25-November 1) except at the Commonwealth, Tandang Sora, Muñoz, and Balintawak markets. Despite the stable supply, some retailers still gave feedback that the wholesale price from some of their respective suppliers remain high.

*It was observed that there is a lesser supply of seaweeds available in some of the monitored markets

*Meanwhile, the price and supply of Tilapia remain stable in all the monitored markets due to the adequate supply coming from Batangas and Pampanga.

*Per market vendors, the nearing of the Christmas holidays may contribute to the relatively higher wholesale price of some fishery commodities.

*Some markets vendors are selling live Tilapia at Php20.00/kg higher than fresh-chilled Tilapia.

*Bangus, Tilapia, and local Galunggong are being sold in mixed sizes in some of the monitored retail markets.

*There were recorded feedbacks from some market vendors at the Commonwealth, Navotas, Kamuning, and Quinta Markets that despite the nearing of Christmas holidays, the demand for fishery commodities remain low (i.e., matumal ang bentahan), urging them to lower their selling price (i.e., bagsak presyo) just to get back their capital.

General Observation

The disparity of prices in top 15 and other commodities depends on the species, size, quality, volume of supply, source area and weather condition.
