NA- Not Available during price monitoring activity (Source area)

(-)- Not Available during price monitoring activity (Price & Volume)

Remarks/Market Observations:

CAR

There are no significant changes in the prices of commodities and there is a limited supply of fishery commodities in the provinces of Abra and Ifugao

R 01

Week 1(Sept. 1-7)

Prices of some fishery commodities including Malaga, Lapu-lapu, Yellow Fin and Sugpo increased due to the bad weather condition and there is a limitation in supply of fishery commodities in Laoag City due to habagat.

Week 2-4(Sept. 8-30)

Higher price and low supply in markets due to the bad weather condition caused by Typhoons Ineng and Habagat.

R 02

Week 1(Sept. 1-7)

There is a significant price difference between fresh and frozen commodities.

R 03

Week 2(Sept. 8-14)

Prices of some commodities is higher due to traders intervention and bad weather condition.

Week 3(Sept. 15-21)

Prices of fish depend on the volume of fish catch, sizes and consignment basis

R 04A

Week 1(Sept. 1-7)

Sardinella lemuru in Lucena City Public Market is being sold at a low price due to their small size. There is an increase in the price of some marine fishes due to the low volume of catch caused by the bad weather condition

Week 2(Sept. 8-14)

Sardinella lemuru in Lemery Public Market and Lucena City Public Market is being sold at a low price due to their small size. There is an increase in the price of some marine fishes due to the low volume of catch caused by the bad weather condition.

Week 3(Sept. 15-21)

The prices of some commodities is higher due to bad weather condition

Week 4 (Sept. 22-30)

Sardinella lemuru in Lemery Public Market and Lucena City Public Market is being sold at a low price due to their small size. There is an increase in the price of some marine fishes due to the low volume of catch caused by the bad weather condition.

R 04B

Week 1-2(Sept. 1-14)

Higher price and low supply in markets are due to the Habagat.

R 05

No observation

NCR																						
Week 1(Sept. 1-7) *It was observed during actual price monitoring that the supply of Bangus decreased this week. Per retailers, this trend begun on the last week of August when the supply coming from major source areas (i.e., Bulacan, Batangas, and Pangasinan) started decreasing. This resulted to an increase in the selling price of some of their wholesalers. However, the retailers said they opted not to change their price due to the low demand (i.e., matumal ang bentahan) *The supply of Galunggong "Lalaki" (Decapterus macrosoma) in the monitored retail markets remain low due to (1) the lower volume of unloading in fish ports due to the interrupted fishing operations because of Typhoon "Liwayway"; and (2) increase in selling price of some wholesalers, which urged some retail vendors to lessen their supply. The recorded decrease in the supply of Galunggong "lalaki" was observed to cause an increase in its prevailing price to Php160.00/kg & Php180.00/kg. *The low supply of local Galunggong has caused an increase in the number of retail vendors selling frozen/imported Galunggong. *Some retail markets are observed to have an abundance in the supply of Galunggong "Balsa" (Decapterus macarellus) and Galunggong "Babae" (Decapterus russelli). *The increase in the price of some fishery commodities, including local Galunggong, might be attributed to the nearing of the Christmas holiday. Some retailers have already cautioned the public of an expected increase in the retail price of major fishery commodities due to the aforementioned holiday season. *On the other hand, the supply of Tilapia remain stable in majority of the monitored retail markets. Contrary to this observation, some retail vendors are selling their Tilapia at a higher price due to an increase in the selling price of their respective wholesalers. *Some markets offer live Tilapia at Php20.00/kg higher than fresh dead Tilapia. *Bangus, Tilapia, and local Galunggong are being sold in mixed sizes in some of the monitored retail markets. *Despite to aforementioned observations, the prevailing retail prices of medium-sized Bangus and Tilapia remain at Php160.00/kg and Php100.00/kg, respectively. The low demand for fishery might contribute to the relatively lower and unchanging prices of some fishery commodities, including Bangus and Tilapia.																						
Week 2(Sept. 8-14) *Based on the team's actual price monitoring, the supply of marine fishes remain low in majority of the monitored retail markets due to: (1) the lesser volume of unloading due to interrupted fishing operations caused by the recurring heavy rain and strong winds brought about by Southwest monsoon ("Habagat"); (2) increase in the supplier's wholesale price alongside the low demand (i.e., matumal ang bentahan) for fishery commodities which pressed some retailers to lessen their supply. *The low demand for fishery commodities urged some retailers to lower their price (i.e., bagsak presyo) in order to get back their capital while some vendors opted to not open due to continuous losses. *The observed low supply for local Galunggong urged some retail vendors to sell frozen/imported Galunggong as an alternative. *A large volume of Galunggong "Balsa" (Decapterus macarellus) and "Babae" (Decapterus russelli) are available in majority of the monitored retail markets. *Some retailers noted that their respective wholesalers increased their selling price due to the low supply of Bangus coming from major source areas (i.e., Bulacan, Batangas, and Pangasinan). *As for Tilapia, the supply of the said commodity is stable for the whole week. It was observed that markets vendors are selling live Tilapia at Php20.00/kg higher than fresh dead Tilapia. *Bangus, Tilapia, and local Galunggong are being sold in mixed sizes in some of the monitored retail markets. *The current prevailing retail prices of medium-sized Bangus, Tilapia and Galunggong are Php160.00/kg & Php180.00/kg, Php100.00/kg, and Php160.00/kg, respectively. *Some vendors have warned of a possible further increase in the price of fishery commodities migdue to the nearing of Christmas holidays.

<p>Week 3(Sept. 15-21) The following observations were observed/gathered during the team's actual price monitoring this week (September 16-20): *The supply of seaweeds and marine fishes, including local Galunggong, are low in the majority of the monitored retail markets. Per market vendors, this may be attributed to: (1) the recurring heavy rain and strong winds brought about by tropical depression "Marilyn", and "Nimfa", which hindered fisherfolk in continuing their fishing operations; (2) lower supply bought by retailers due to the low demand and the increase in their respective suppliers' wholesale price. *The low supply of local Galunggong urged some retail vendors to sell frozen/imported Galunggong, and for some wholesalers to increase their selling price. * The low demand for fishery commodities also caused retailers to lower their prices (i.e., bagsak presyo) to get back their capital and for some to totally close their stalls due to continuous losses. *There is an observed abundance of Galunggong "Balsa" (Decapterus macarellus) and "Babae" (Decapterus russelli) in the monitored markets. *The supply of Bangus and Tilapia are stable in the majority of the monitored retail markets. However, it was noted that some wholesalers are selling their supply of the said commodities at a higher price despite the stable supply. *It was also observed that the wholesale price of fishery commodities is higher as compared to last July and August. Per interviews with market vendors, this might be attributed to the nearing of the Christmas holidays. *Some markets vendors are selling live Tilapia at Php20.00/kg higher than fresh dead Tilapia. *Bangus, Tilapia, and local Galunggong are being sold in mixed sizes in some of the monitored retail markets. *The current prevailing retail prices of medium-sized Bangus, Tilapia and, Galunggong are Php140.00/kg & Php160.00/kg, Php100.00/kg, and Php180.00/kg, respectively. *It was noted that the price of some high-value marine fishes such as Yellow fin (Thunnus albacares) increased due to limited supply. *Some vendors have warned of a possible further increase in the price of fishery commodities due to the nearing of Christmas holidays.</p>																						
General Observation																						
The disparity of prices in top 15 and other commodities depends on the species, size, quality, volume of supply, source area and weather condition.
