**Remarks/Market Observations**

**The following observations were gathered from market vendors and administrators for the month of November:**

1. Minimal volumes of local-fresh galunggong and alumahan were reported among the monitored retail markets this month due to the implementation of Closed Fishing Season (CFS) at Northeastern Palawan and Visayan Sea. In addition, the cold weather condition, which pushes marine fishes to stay at the bottom of the ocean, also contributes to the low availability of the marine commodities.
2. Abundant supplies of imported-frozen galunggong continues to be observed at the monitored retail markets this month due to the limited supply of the local-fresh variant. According to vendors, most of the supplies of Galunggong at the fish ports are imported-frozen. Most of the vendors prefer selling imported-frozen galunggong due to its cheaper price making it easier to sell.
4. The prevailing retail prices of Bangus and Tilapia have remained stable as supplies continued to be sufficient at the retail markets. The stable demand also contributed to the steady retail prices of the commodities. According to vendors, unloaded supplies of Bangus this month were mostly medium-large-sized due to the nearing of Christmas Holiday. Most of the supplies were sourced from Pangasinan, and Batangas, respectively.
5. Top fishery commodities in the seventeen (17) monitored retail markets are sourced mainly from the following areas:
  - a. Bangus - Bulacan, Pangasinan
  - b. Tilapia - Batangas
  - c. Local-fresh Galunggong - Lucena, Quezon
  - d. Imported-frozen Galunggong - Navotas
  - e. Alumahan - Malabon Fish Port

<p><b>Remarks/Market Observations</b></p>	<p>6. Fluctuations in the prices of the top fifteen (15) and other commodities are influenced by a number of factors such as the commodity's size, quality, volume of supply, source area, as well as the weather condition and other natural phenomena.  *<i>Auxis thazard</i> or Tulingan (Php140 - Php300/kg)- lowest prevailing price of Php140.00/kg were recorded at Malabon Market, where is it considered a primary market which offers a lower price. Highest prevailing price of Php300.00/kg were recorded at Guadalupe &amp; Mandaluyong Markets, where vendors sourced their supply from nearby primary markets which makes the price high.  *<i>Mene maculata</i> or Chabeta (Php160 - Php300/kg)- lowest prevailing price of Php160.00/kg was recorded in Marikina Market where the available supplies were not in good quality resulting to a lower price. Highest prevailing price of Php300.00/kg was noted at Pasig Market where available supplies were in good quality sourced from Lucena, Quezon, thus higher price.  *<i>Selaroides leptolepis</i> or Salay Ginto (Php160 - Php300/kg)- lowest prevailing price of Php160.00/kg was recorded in Caloocan Market where the available supplies were directly sourced from Fish Ports, hence, lower price. Highest prevailing price of Php300.00/kg was noted at Guadalupe Market where available supplies were sourced in primary markets which resulted to a higher price.  7. In view of the escalating COVID-19 cases in Metro Manila, physical price monitoring activity in the ten (10) monitored retail markets are temporarily suspended beginning 20 August 2021 (Friday) until further notice. Relative to this, daily price data and market observation are gathered via phone calls covering Top 4 Fishery commodities (i.e., bangus, tilapia, alumahan, local-fresh and imported-frozen galunggong).  8. According to vendors, "Matumal ang bentahan" is still apparent among monitored retail markets this month. Relative to this, most vendors sell only limited volumes or limited varieties of fishery commodities to ensure all their stocks are sold by the end of the day and open their fish stalls only during weekends where there is higher influx of buyers.  9. Market administrators continue to implement and observe precautionary safety measures against COVID-19 in accordance with the Alert level 2-Community Quarantine protocols to ensure that vendors and consumers protected against the virus. Among these measures are wearing of facemasks and face shields, mandatory temperature checks, and regularly scheduled cleaning and disinfection, and others.</p>
