**ESTABLISHMENT OF LEGISLATED HATCHERIES  
IN LINGIG, SURIGAO DEL SUR AND JABONGA, AGUSAN DEL SUR**

**TERMS OF REFERENCE**

**I. BACKGROUND**

High-quality seed, of known breeding history, is increasingly sought in aquaculture because, with appropriate husbandry, its performance is more predictable than that from seed of unknown provenance.

Provision of adequate quantities of good quality wild or domesticated, genetically improved seed for aquaculture is highly complex. It depends upon a wide range of environmental, biological, and socioeconomic factors that are often interactive. For seed that is collected from the wild or raised from wild caught broodstock, available quantities depend mainly upon the status of the capture fisheries from which the seed or broodstock are taken. Many

of these fisheries are in decline through overexploitation and environmental degradation. The live reef food fish trade for marine carnivorous finfish (groupers and snappers) is a good example (ADB, 2003).

The aquaculture subsector in the Philippines has not yet realized its full potential in terms of contribution to national growth and development. One of the reasons is the issue of resource depletion. The reliance of wild seed stock, limited species varieties and high cost of fry has resulted in depletion of wild/natural stock over time. The depletion problem, in turn, is associated with the lack of hatchery technology as well as limited funds/investment for hatchery and broodstock development.

The House of Representatives undertakes measures to provide concrete solutions to address these problems through passing a House Bill and enactment of legislation and in addressing food security, promoting sustainable development of fisheries resources and reducing poverty incidence among the fisherfolk..

Republic Act 10787 and 10813 mandates BFAR to establish under its supervision a multi-species hatcheries in Lingig, Surigao del Sur, and Jabonga, Agusan del Norte. In order to operate the hatchery, microscopes and laboratory equipment that measure water quality parameters such as salinity, pH levels and temperature are required. The equipment will allow the technicians to ensure that the fry would thrive in clean and non-toxic waters. This would also make sure that the production estimates presented in the feasibility study will be met, improving fish and seafood sufficiency. Hence this project is being proposed to operationalize the provisions of the law.

## II. OBJECTIVES

The goal of this project is to strengthen the hatchery industry to address critical farming issues, such as limited species variety, high fry cost and erratic supply.

Specific:

To construct the multi-species hatcheries in the following sites:

- Lingig, Surigao del Sur
- Jabonga, Agusan del Norte,
